An important tool in approximation (of not only numbers) is continued fractions. We develop some of their basic properties in section 1.3. We present the argument of Liouville producing transcendental (i.e., non-algebraic) numbers and give Hilbert's proof of the transcendence of

Euler's number e . Sun, 18 Nov 2018 10:53:00 GMT INTRODUCTION TO NUMBER THEORY - Univerzita Karlova - In number theory, the field of Diophantine approximation deals with the approximation of real numbers by rational numbers. It is named after Diophantus of Alexandria.. The first problem was to know how well a real number can be approximated by rational numbers. For this problem, a rational number a/b is a "good" approximation of a real number \hat{x} if the absolute value of the difference between a/b and \hat{x} is less than $1/b^2$.
